

TEDx Stage Design

Logo: Only your specific event logo can be represented on stage; **never** the TEDx logo (without your place name), and **never** the TED logo.

Stage Design Rules and Guidelines

Well-placed screen: You'll want to place your projection or video screen where the audience won't have to turn their heads to see it -- but also where it won't interfere with the live speaker.

Include a **Timer** and a monitor with **Slides** for Speakers

Rug: Use a rug on stage to put the focus on speakers

Layered lighting: Flat lighting will make even the most exciting performance dull to look at. Even if your venue only has fluorescent lights, you can avoid the "lecture hall" look by borrowing floor lamps from your home and placing them at the foot of the stage.
